CUSTOMER:_____

Guangzhou Shenghe Electronic Technology Co., Ltd.

SPECIFICATION FOR APPROVAL

SHDR®

Product Description: Aluminum Electrolytic Capacitors

Customer No.:

Specification: HP 2200μF/125V 30X50 125VF

Date : 9th, May, 2022

Environmental Certification: ROHS

Confirmation from Manufacturer

Drafted by	Verified by	Approved by
姚海洋		李艳林

Confirmation from User

SHDR® Application Notes

When you use aluminum electrolytic capacitors ,remember the following:

1. Polarity
   Regular aluminum electrolytic capacitors has polarity
   Reverse voltage causes short circuit breakage of the capacitor or leakage of electrolyte .Where the polarity in a circuit sometimes reversed or unknown ,a bi-polar capacitor should be used.

2. Overvoltage
   Do not apply overvoltage continuously.
   When overvoltage is applied to the capacitor ,leakage current increase drastically.
   Applied working voltage to capacitors should not exceed the rated working voltage of capacitor.

3. Operating temperature and life
   Do not use the capacitor over the max operating temperature.
   Life time of the capacitor depends on the temperature.
   Generally ,life time is doubled by decreasing each temperature 10℃
   Use temperature as low as possible.

4. Vent
   It is recommended at least 3mm of space around the vent.
   If such space is not provided ,the vent will not operate completely.

5. Ripple current
   Do not apply a ripple current exceeding the rated maximum ripple current.
   Applying too much ripple current to the capacitor causes great heat generation ,invites deterioration of properties of causes breakage.
   Please consult factory if ripple current exceeds the specified limit.

6. Charge and discharging
   Frequent and quick charge/discharge generates heat inside the capacitor ,causing increase of leakage current ,decrease of capacitor ,or breakage occasionally.
   Consult us for assistance in this application.

7. Storage
   When the capacitor is stored for a long time without applying voltage ,leakage current tends to increase.
   This returns to normal by applying the rated voltage to the capacitor before use.
   It is recommended to apply D.C .working voltage to the capacitor for 30 minutes through 1kΩ of protective series resistor ,if it is stored for more than 6 mouths .
   The capacitor should be stored at a normal temperature and humidity .

8. Soldering
   Improper soldering may shrink or break the insulating sleeve add/or damage the internal element as terminals and Lead wires conduct heat into the capacitor.
   Avoid too high a soldering temperature and/or too long a soldering time.

9. Mechanical stress on the lead wire and the terminal
   Do not apply excessive force to the lead wire and the terminal.
   Do not move the capacitor after soldering to the PC board ,not carry the PC board by picking up the capacitor .For their strength ,refer to JIS C-5141 and C-5102.

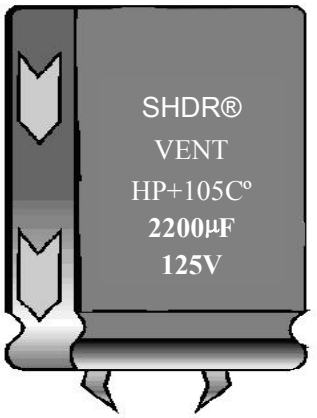
10. Cleaning of boards after soldering
    If the capacitor is cleaned in halogenated solvent for organic removing solder flux solvent ,the solvent may penetrate into inside of capacitor, and may generate corrosion.

11. Sleeve material
    The standard sleeve material is polyvinyl-chloride.
    If exposed to xylene ,toluene ,etc ,and then subjected to high heat ,the sleeve may crack .This sleeve is not insulating material.

12. Micon's Products meet or exceed quality standards specified by JIS-C5141W and with the reliability requirements refer to JIS-C-5102.

13. None of ozone depleting chemicals(ODC) under the Montreal Protocol is manufacturing process of Shen Zhen Moonlight Electronic Industrial CO.,Ltd.

SHDR® HP Series



HP Series Snap-in Type 105℃

Features

- Highly reliable capacitors that withstand ripple current.
- Terminal spacing fixed at 10 mm for printed circuit board plug in.
- Aluminum case designed explosion-proof vent.
- Best for switching power supplies.

Specifications

Item	Performance Characteristics	
Operating Temperature Range	-40to+105℃	-25to+105℃
Rated Voltage Range	10to100VDC	160to450VDC
Capacitance Range	330to68000 μF	33to2200 μF
Capacitance Tolerance	±20%（100Hzor120Hz，+20℃）	
Leakage Current（+20℃）	I≤0.02CV After 5 minutes,whichever is greater measured with rated working voltage applied	

Dissipation Factor（tg δ）

μF\ WVDC	10~16	25~35	50~63	80~100	160~250	315~450
47~390	--	--	--	15	15	20

Load Life

Test conditions
Duration time：2000 hours
Ambient temperature：+105℃
Applied voltage：Rated Working Voltage （VDC）
After test requirements：Resumed 16 hours at normal temperature
Capacitance change：≤±20% of the initial measured value
Dissipation Factor：≤200% of the initial specified value
Leakage Current：≤The initial specified value

Shelf Life

Test conditions
Duration time：1000 hours
Ambient temperature：+105℃
Applied voltage：None
After test requirements：Resumed 16 hours at normal temperature
Same limits as Load Life
